

REIGNMAKER

Equip with Nematode Nemesis technology

This system is designed to improve *soil health*, provide *substantial N and K* during pod fill, and *supress nematode populations* without *sacrificing planter performance*

THE MIX

Bluetide Rye

Very late maturity rye with broad termination window soils

Crimson Clover

variety with good fall growth and earliest spring growth of all clovers

Berseem Clover

high biomass production and earlier spring growth

Persian Clover

Promotes late growth and full season benefit

Nematode Nemesis Technology

Radish Species bred to supress nematodes while breaking down to prevent planting issues

THE METHOD

1. Seed Reignmaker Blend
2. Terminate Rye in Late-Winter/Early-Spring
3. Sample Legume Cover for Nutrient Content
4. Roll Cover Crop prior to Planting
5. Plant Soybean Crop
6. Terminate Cover
7. Identity Nutrient Credit and Adjust Fertility as Necessary
